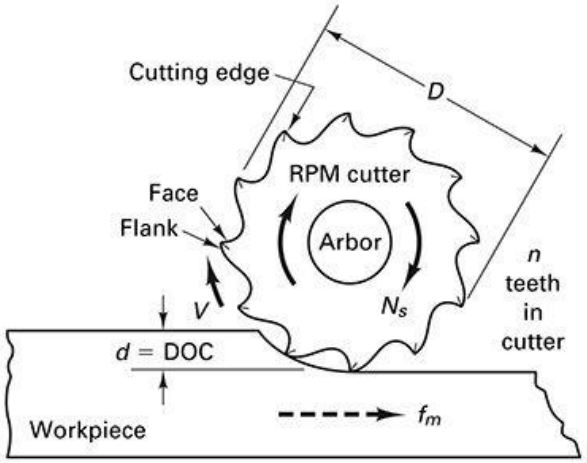
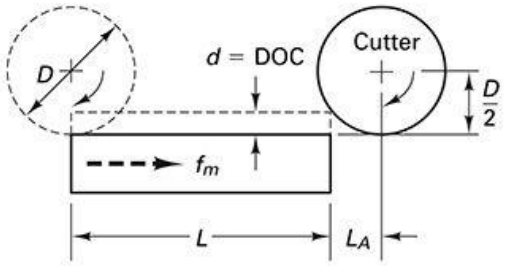
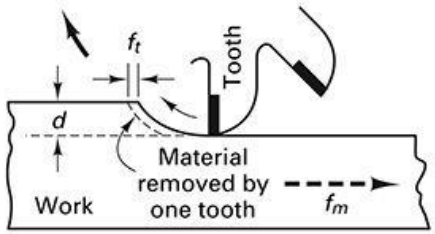
Peripheral (Slab, Side) Milling



(b) Slab milling—multiple tooth

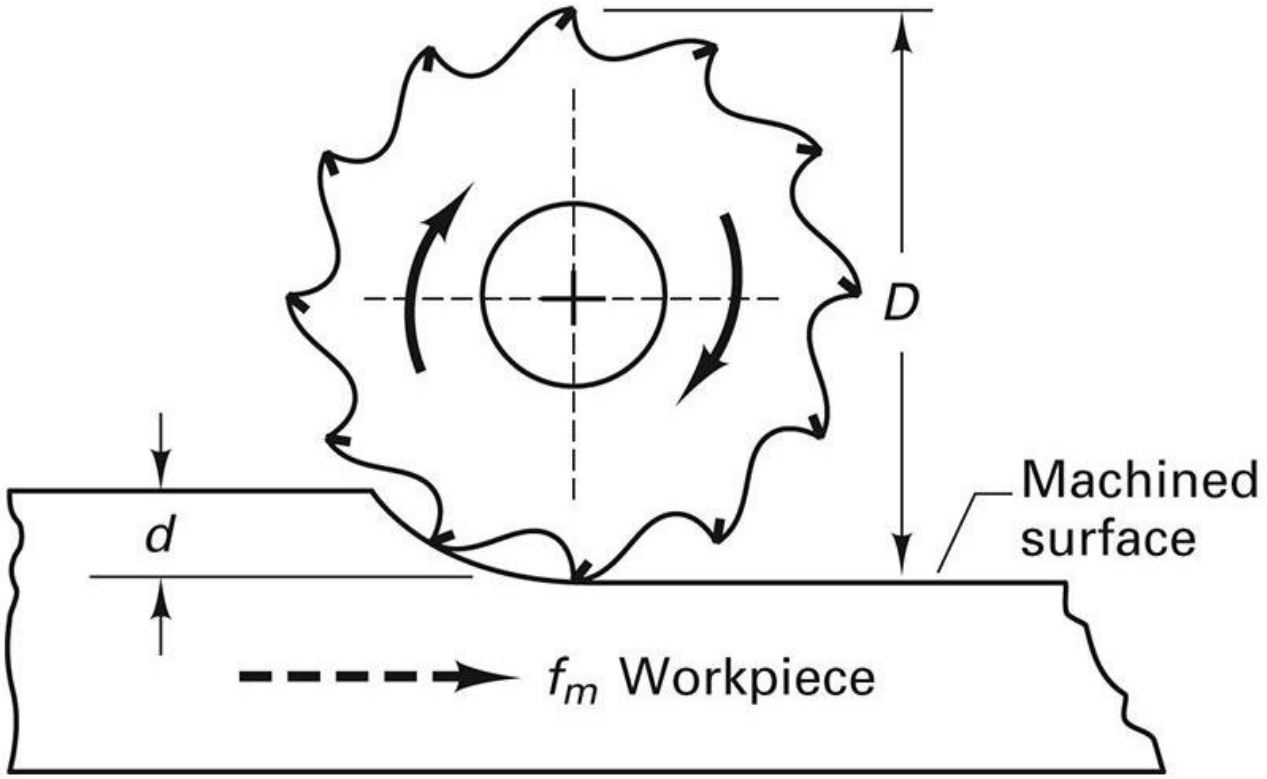


(c) Allowances for cutter approach



(d) Feed per tooth

Peripheral (Slab, side) Milling
Cutter rotation is for Up Milling



Cutting Parameters: surface parallel to axis of cutter

- Cutting speed, $V = {}^{\pi DN}/_{12}$ (ft/min)
- Table feed rate, $f_m = f_t\, N\, n$ (in/min)
- Material removal rate, MRRMRR

$$MRR = {}^{LWt}/_{T_c} \quad \text{or} \quad MRR = Wtf_m$$

- t - depth of cut
- N - RPM
- D - dia. of cutter
- f_t - feed per tooth
- n - no. of teeth
- L - length of cut
- W - width of cut
- T_c - cutting time
- V - surface ft/min
